

Activated Probiotics – Biome Dental Probiotic Market Brief

Executive Summary (≤180 words)

Biome Dental™ Probiotic is a combination of four specific probiotic strains which have been shown to support tooth and gum health via their beneficial effects on the oral microbiome across 7 clinical trials. Manufactured by Activated Probiotics, an Australian company, the product comes in mint-flavored powder sachets containing 1.25 billion live bacteria per dose.

In one randomised placebo-controlled trial where 60 healthy children took Biome Dental™ once a day before bed, significant improvements in gum health and reduced dental plaque were observed within just three days. After 14 days, Biome Dental™ reduced the build-up of dental plaque by 69% and significantly improved gum health, with a 68% reduction in gingival index.

The product is shelf-stable, requires no refrigeration, and is suitable for adults and children over 5 years. It contains no GMOs, wheat, gluten, dairy, lactose, fructose, nuts, seeds, peanut, soy, egg, fish, shellfish, or animal derivatives, making it suitable for vegetarians and vegans. Available in 28-sachet packages through Australian pharmacies and health retailers, pricing ranges from approximately AUD \$35-45 retail.

Quick Answers

What can be found on it?

- Four specific probiotic strains: Lactobacillus helveticus Rosell®-52, Lactobacillus rhamnosus Rosell®-11, Bifidobacterium longum Rosell®-175, and Saccharomyces boulardii
- 1.25 billion live bacteria per 1g sachet
- Natural mint flavoring with polyols
- No artificial additives, preservatives, or common allergens
- Registered with Australia's Therapeutic Goods Administration (TGA)

What is it good for?

- Supporting tooth and gum health, reducing bad bacteria in the mouth, supporting a healthy oral microbiome, and helping reduce build-up of dental plaque
- Addressing gingivitis and gum inflammation
- Maintaining oral bacterial balance
- Supporting overall oral hygiene alongside traditional dental care

Why do we need it?

The health of the oral microbiome influences many aspects of oral health. The composition and balance of bacteria within oral biofilms alters the production of acidic, alkali and antimicrobial metabolites and the immune system's inflammatory response, influencing the risk of dental cavities, gingivitis and periodontal disease. Traditional mouthwashes often kill both harmful and beneficial bacteria, while probiotics specifically target pathogenic organisms while supporting beneficial ones.

Deep Dive

Overview

Activated Probiotics formulates Australian probiotics based on microbiome science that target specific conditions to help reduce & prevent chronic diseases. Founded as part of the precision probiotics movement, the company focuses on condition-specific formulations rather than general-purpose supplements.

International Users

- **Best Choice:** BLIS Probiotics for global availability
- **Alternative:** ProDentim for online ordering
- **Considerations:** Shipping and regulatory restrictions apply

Red Flags

- **Regulatory Compliance:** Ensure products are approved in your region
- **Age Restrictions:** Not suitable for children under 5 years
- **Allergies:** Check ingredient lists despite "allergen-free" claims
- **Storage:** Monitor temperature requirements for efficacy
- **Interactions:** Consult healthcare providers if taking antibiotics

Implementation Tips

Practical Setup

1. **Timing:** Use consistently at bedtime for 30+ minutes of oral surface contact
2. **Sequence:** Brush → floss → mouthwash (if used) → wait 30 minutes → take probiotic
3. **Storage:** Keep sachets in original packaging, below 25°C
4. **Monitoring:** Track gum health improvements over 2-week periods

Usage Optimization

- **Consistency:** Daily use is critical for microbiome establishment
- **Patience:** Allow 3-14 days for noticeable improvements
- **Integration:** Coordinate with dental visits and professional cleanings
- **Documentation:** Log usage and oral health changes for dental appointments

Backup/Export Strategy

- **Supply Management:** Maintain 1-week backup supply
- **Travel:** Individual sachets are travel-friendly
- **Monitoring:** Use dental photos to track visual improvements
- **Healthcare Integration:** Share results with dental professionals
