Sunshower Toolkit

The importance of sunlight

Make the positive effects of sunlight part of your daily showering routine. A healthy dose of sunlight; that is what Sunshower® offers all year round, with its warming infrared and low-dose UV light. Sunlight nourishes the body and makes you feel fitter, more alive and energetic.

Branding

In this Toolkit you will find all the content you can use for your own website, social media, etc.

Text

Do's & don'ts - text

This makes us happy:

- Vitamin D
- Low-dose UV light
- Warming infrared
- Daily shower ritual
- Energetic / vital / fit
- Relaxation
- Scientific research
- Safe use

None of this:

- Tanning bed
- Or sunbed in the shower
- Getting tanned
- Tanning

Why

Why Sunshower?

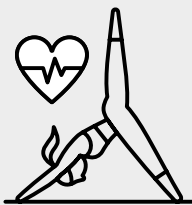

Feel great

Sunlight has a positive effect on your well-being and energy level. The result: more vitality and a better sleep pattern.

Improve your mobility

Infrared light improves blood circulation and helps to get rid of waste faster. It restores sore muscles and encourages the body to relax deeper.

Stay healthy

Too much sunlight is not good for you, but too little is also unhealthy. Low-dose UV light induces natural production of vitamin D and contributes to a more efficient immune system, resulting in improved mental health.

Light

Sunshower's sunlight

Warming infrared

Infrared offers many benefits to the body: A wonderful feeling of relaxation, improved circulation and pain relief.

Infrared Spectrum

Sunshower® infrared consists of two wavelengths: short wave (IRA) and medium wave (IRB). IRA warms and penetrates deeply into the body. It improves blood circulation, making it easier to break down waste. This decreases both muscle tension and joint pain. IRB is almost completely absorbed by the top layers of the skin, creating a warm feeling.

Low-dose UV light

Low-dose UV light supports the immune system and promotes pigmentation of the skin.

Types of UV light

Sunshower®'s UV light consists of two wavelengths, UVA and UVB. Sunshower® emits 80% UVB light and 20% UVA light. UVB light plays a major role in the production of vitamin D. UVA light penetrates deeper into the skin and converts the pigment present into a light complexion.

Safety

At Sunshower®, safety comes first. That's why we have been working closely with medical specialists to conduct research on the effects of UV light since 2007. Sunshower® always delivers a smart low dose of UV light while showering.

Benefits

Themes infrared

A) **Supple muscles and joints**

Sunshower®'s warming infrared provides a feeling of well-being. The infrared heat penetrates deep into the skin and stimulates blood circulation. This accelerated metabolism ensures that muscles are better supplied with blood and this makes them supple. This also reduces joint pain. This pleasant warmth provides optimal relaxation.

B) **Relief of rheumatic complaints**

Muscle and joint disorders are common complaints. The warming infrared light from Sunshower® penetrates deep into the skin and has a relaxing effect on your muscles. The improved blood circulation reduces muscle tension and joint pain. Resulting in a positive effect on rheumatic complaints.

C) **Faster muscle recovery after exercise**

The warming Infrared penetrates deep into the skin, warming the body from the inside out. This stimulates the metabolism in the muscles. This ensures that not only are waste products removed faster, but also nutrients and building materials can be supplied more easily. This allows the body to recover faster after a major effort.

Benefits

- 1 | Improved blood circulation and pain relief
- 2 | Pleasant heat for the body
- 3 | Deep cleaning of the skin

Benefits

Themes of UV light

A) Vitamin D at year-round levels

Vitamin D plays a central role in regulating the immune system because it helps activate as well as suppress immune cells. By counteracting a vitamin D deficiency, you reduce your chances of getting respiratory infections, flu and colds. You get 20% of your vitamin D from food and 80% from UVB light. Whether enough vitamin D is produced is mainly determined by the amount of sunlight we have available. From October through March, the strength of the sun in Northern Europe is too low to produce vitamin D through the skin. Scientific research has shown that with Sunshower® it is possible to maintain the vitamin D level throughout the year.

B) Pigmentation and preparation for the summer sun

The UV light from Sunshower® consists of two wavelengths, namely UVA and UVB. Sunshower® emits 80% UVB light and 20% UVA light. When the skin comes into contact with UVB rays, pigment is produced. This causes the skin to thicken, with the result that UV rays cannot penetrate as deeply into the skin. This is a natural mechanism of the skin to protect itself from the sun. A structural low dose of UVB radiation from Sunshower® responsibly initiates this process. After this, the skin is accustomed to the sun, so it is less likely to get sunburned and has a summer complexion that is retained longer.

C) Better sleep pattern, more energy

Sunlight allows our bodies to function optimally. It nourishes our bodies and makes us feel fitter, more alive and energetic. Through daylight, we make serotonin. The serotonin made during the day is converted into the sleep hormone melatonin at night. The more serotonin, the more melatonin you can make. That's why you sleep deeper and better after a day with lots of daylight. When daylight is low in winter, Sunshower® can help keep energy levels high.

Benefits

- 1 | Maintain vitamin D level all year-round
- 2 | Positive effect on sense of wellbeing
- 3 | Good preparation for the summer sun

Quick

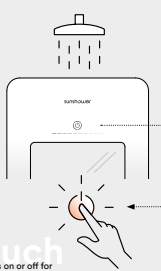

Quick Guide

Sunshower ONE / PLUS

Sunshower ONE

Start

EN

1

Touch

Press on or off for
infrared

2

Time

Full programme → infrared 10 minutes
Shorter programme → press touch button
Post-cooling → few minutes

3

Infrared

Sunshower® infrared consists of two wavelengths: short wave (IRA) and medium wave (IRB). IRA penetrates deep into the body and warms from the inside out. IRB provides the warm feeling on the skin.

4

Maintenance

After use, wipe the Sunshower glass plate dry with a squeegee. If necessary, wipe with a dry cloth afterwards. Order our cleaning set through the dealer for long-term maintenance.

5

Healthy

Improve your mobility and stay healthy. The warming infrared has a relaxing effect. It improves blood circulation, allowing waste substances to be removed more quickly and painful muscles to recover better.
