

Research on Litecard

Overview of Litecard

Litecard is an Australian technology company that provides a platform for creating and managing **digital wallet passes** that live inside Apple, Google and Samsung Wallet. The platform enables organisations to replace physical membership cards, loyalty cards, coupons and event tickets with mobile wallet passes. Litecard's website positions the product as an end-to-end solution that offers tools for converting barcodes into digital passes (via **Walletmaker**), creating membership and loyalty cards, distributing promotions, handling billing/renewals and collecting analytics ¹ ².

Key functionalities

Feature	Description & evidence
Digital pass creation & distribution	Litecard's platform lets businesses design and issue digital wallet passes for loyalty cards, membership IDs, coupons and event tickets. The Walletmaker tool allows anyone to convert a physical barcode or QR code into a pass and store it in Apple/Google Wallet in under three seconds ¹ . The passes can be created via a dashboard, API or CSV batch, and each pass contains a unique download URL and QR code ³ .
Integration with CRM/ e-commerce/PoS	Litecard emphasises plug-and-play integrations. Their main marketing page states that branded signup forms and wallet-pass experiences can be created "in minutes with no integration required" and the platform "supports a range of plug-and-play integrations across existing products" ⁴ . A dedicated guide shows how to embed "Add to Wallet" buttons and QR codes into templates for Klaviyo, Yotpo, Salesforce and Dotdigital email systems ⁵ , and instructs how to generate passes via API or CSV ³ . Litecard can also "bolt onto your existing CRM, PoS, CDP or eCommerce membership system" ⁶ .
Membership management	For organisations with recurring memberships, Litecard offers tools to personalise tiered membership cards, automate renewals and expirations, collect payments and push data to existing systems ⁷ . Members can access their points, voucher balances and tier progress directly in the mobile wallet without downloading an app or returning to emails/SMS ⁸ . The platform includes features such as sign-up forms, custom fields, payment collection, in-store identification via scan or tap and a user table for managing members ⁹ . It also offers push notifications, personalised SMS/emails, expiry automation and API triggers for notifications or pass updates ¹⁰ .

Feature	Description & evidence
Promotions and offers	A promotions module lets marketers deliver branded offers and vouchers to customers' mobile wallets with one click from ads or other channels ¹¹ . Customers can save offers to their phones without any code and redeem them using wallet passes. The module supports bulk upload of existing lists and DIY design for mass distribution ¹² . Stand-alone distribution (no integration needed) or one-day integrations with PoS/CRM systems are offered ¹³ .
Analytics and segmentation	The platform tracks pass downloads, notification opens, redemptions and geo-activity. Organisations can view real-time data, export reports, segment users and schedule targeted notifications ¹⁴ ¹⁵ . This data is used to personalise offers and measure campaign performance.
Compatibility & offline functionality	Litecard supports Apple, Google and Samsung Wallets and can work offline and across multiple regions ¹⁶ . Passes store credentials securely alongside banking cards and support functions such as scanning or NFC tap ¹⁷ . The system offers verifiable and unique digital credentials that provide a secure alternative to physical cards ¹⁸ .
Integration with marketing automation	The product emphasises “automate user journeys with any platform or CRM” ¹⁹ and allows sending push notifications triggered by location or expiry dates ²⁰ . Brands have reported significant improvements in CRM performance—for example, Kiehl's saw a 115 % increase in revenue per user , Bonds recorded a 93 % revenue uplift , and LUNE achieved an 87.5 % add-to-wallet rate ²¹ .
Walletmaker for business	A white-label version of Walletmaker can be offered to customers so they can convert their own barcodes into passes with the client's branding; the service includes a dashboard for sending push notifications and designing user journeys ²² .

Use cases and industries

- **Retail & FMCG:** Stores can push digital coupons or loyalty updates directly to customers' wallets, increasing repeat visits and sales ²³ .
- **Hospitality & restaurants:** Digital loyalty cards encourage repeat purchases because redemption is seamless ²⁴ .
- **Fitness centres:** Digital membership cards simplify check-ins and class bookings ²⁵ .
- **Events & ticketing:** Event organisers distribute digital tickets via Litecard, reducing gate wait times and printing costs ²⁶ .
- **Gift cards & secure access:** SourceForge notes that Litecard supports tap passes for gift cards, EV charging, transport and secure access ²⁷ .
- **Government, universities and libraries:** These sectors can issue mobile credentials (student ID, library cards) using Litecard ²⁸ .

Integrations and ecosystem fit

Litecard provides several options for integration:

1. **API/CSV access:** Passes can be generated programmatically via the Litecard API or through bulk CSV uploads. Each pass is delivered with a unique download URL and QR code for distribution ³.
2. **CRM, CDP and marketing automation:** The platform already integrates with popular CRM and email marketing systems such as Klaviyo, Yotpo, Salesforce and Dotdigital. Embedding “Add to Wallet” buttons or QR codes in email templates turns traditional email campaigns into mobile-wallet campaigns ⁵.
3. **PoS and e-commerce systems:** Litecard can be added on top of existing PoS, membership or e-commerce systems. It supports one-day integrations for promotions and uses plug-and-play connectors for membership passes ⁴ ¹³.
4. **White-label front-end:** Walletmaker for business can be whitelabelled, letting a brand's customers convert their own barcodes into passes that carry the brand's logo and colours ²².
5. **Analytics dashboards:** Data from passes, user interactions and redemptions can be fed back into the organisation's analytics, enabling better segmentation and targeted marketing ¹⁴.

External perspectives

Capterra, an independent software review site, describes Litecard as **digital membership card software** that issues customizable mobile wallet passes and automates billing and subscriptions with tiered pricing. It notes that Litecard integrates with existing systems via APIs, authenticates members and provides features such as signup forms, renewals, messaging, notifications and analytics ²⁹. SourceForge's overview highlights that Litecard allows organisations to create Apple, Google and Samsung wallet passes, including tap passes for gift cards, EV charging, transport and secure access. Typical customers include loyalty platforms, gift card providers, PoS companies and public sector card issuers ²⁸.

Considerations for incorporation into your ecosystem

Alignment with needs

- **Usefulness for membership management:** If your ecosystem involves managing memberships (e.g., subscription services, clubs, loyalty programs), Litecard's ability to issue digital membership cards, automate renewals, tier pricing and push notifications fits well ⁷.
- **Integration effort:** Litecard's emphasis on **plug-and-play** connectors and API access suggests relatively low integration overhead. Existing CRM/e-commerce/PoS systems can be connected through simple API calls or CSV uploads ⁴ ³.
- **User engagement:** Real-world case studies show substantial increases in revenue and engagement from wallet-based campaigns ²¹. If your ecosystem aims to improve conversion rates and customer retention, these metrics indicate potential benefit.
- **User experience:** Customers do not need to download a separate app; passes live within the native wallet on their phone and are accessible offline. This could simplify the user journey and increase adoption ⁸ ¹⁶.
- **Branding and white-labelling:** The platform allows full customization of pass design and can be white-labelled, ensuring that your brand identity remains front and centre ²².

Potential limitations & open questions

- **Pricing transparency:** Pricing is not publicly available. Capterra notes that organisations must contact the vendor for pricing and that no free trial is listed ³⁰. Budgetary implications should be assessed.
- **Reliance on third-party wallets:** Users must have Apple, Google or Samsung Wallet installed. In markets where wallet adoption is low, uptake may be limited.
- **Data privacy & compliance:** While Litecard's materials highlight secure storage and encryption, you should verify that the platform meets your organisation's data-protection requirements and regulatory obligations.
- **Feature maturity:** The software appears relatively new (founded in 2021 ³¹) and has few independent reviews. Evaluating references or running a pilot would help confirm performance and support quality.

Conclusion

Litecard is a comprehensive **wallet-pass platform** that transforms physical loyalty cards, memberships and coupons into digital passes and integrates them into CRM, e-commerce and marketing systems. Its key strengths are plug-and-play integrations, white-label flexibility, automated memberships and robust analytics ⁴ ¹⁴. If your ecosystem relies on memberships, loyalty programs, or frequent promotions and you seek to engage customers via mobile wallets, incorporating Litecard could provide considerable benefits. However, due diligence around pricing, privacy, and integration specifics should be performed before adoption.
